Post 🗨️ "Hello LinkedIn Community, At TE Connectivity, we are dedicated to creating game-changing innovations that transform the way people live, work and connect. We are enthusiastic about the future of engineering and technology, and how we play an essential part in these sectors. Our team comprises individuals like Umar Farooq Khan, an AI Engineer, who possesses extensive hands-on experience in building scalable APIs, services, and automations. His work, driven by Python, Django, and Nodejs, reflects our commitment to these industries. For a peek into his contributions - take a look at how he developed ML for Pakistan National Defence models, achieving an incredible accuracy of 97%. Drawing from such talents and their impact, we have witnessed an astounding recovery in conducting business, ramping up a monthly loss of €1B into a €60M profit. This dramatic turnaround signifies a 700% increase, achieved through automation of cross-verifications and document forgery checks - a true testament of our commitment to innovation. As we look ahead, we're keen to share our financial prospects for 2024, touching on profit, loss, and net sales. Your partnership is part of our journey, and we look forward to sharing our growth story with you. Stay with us on this exciting journey! #technology #engineering #innovation" Please note that while work remains to be done on finalizing the financial figures for 2024 (profit, loss, net sales), we wanted to acknowledge your request and assure you that this information will be shared as soon as it becomes available. #TEConnectivity #AIEngineering #DigitalTransformation #BusinessGrowth
